Abstract:

The objective of this deliverable is to describe and discuss the main components of FP7, ERA-WIDE, BIOPARTNERS project website "<http://biopartners-dibb.ge>". The main target of this website is to disseminate activities, deliverables, tasks, millstones and publications on-line to the public. The website in this stage includes 15 pages linked together in the main-page. The header at the top of the main page contains the logo of the BIOPARTNERS project, the main-page links to other home-pages which contain all related information of BIOPARTNERS project, general information about the partners, deliverables and some information about FP7. BIOPARTNERS website is built taken in mind the human computer interaction methodologies to facilitate the usage of end-users in order to attract as much as possible more people and visitors, therefore, the colors, the background, text fonts and the movement from page to page are taken in mind.

1. Introduction

The website in general is an informational media aims to educate and stimulate an on-line community where the public share ideas and thoughts in formal form. In our case, it is a tool used to disseminate the BIOPARTNERS activities and tasks as well as FP7 EU projects. It allows BIOPARTNERS partners to work more efficiently and effectively by improving communications between each other. The website is designed for public access, the contents are free for anyone without any profit. It organized to be non-profit for people who interest to advertise their academic announcements, publications, call for conferences, call for participations and any other issues related to FP7 platform.

In the BIOPARTNERS website, we cared to the main three elements of publicity: the organization of the content and how it is navigated, the appearance of the web-pages and finally, the content in its own right. This is very much a pre-production planning stage which is very important since we are going to implement the website effectively. We targeted our website tying in with any existing promotions, color schemes, the logo and graphical interfacing is taken in mind to reflect the BIOPARTNERS objectives and targets. The web pages are designed to be interactive, they respond to the user's actions. This can be simple, such as the color of a link changing color when the user places their cursor over it.

The content of the BIOPARTNERS project is very important element in the website, we incorporated the most kinds of digital media, and this includes written text, pictures, animation, PDF documents, and Microsoft Office documents. We cared and optimized the media for the Internet so that it has a smaller file size and therefore downloads faster; this applies to pictures and other digital media elements.

2. Website Location

The website is located on the servers of Caucasus Online, Ltd. and is accessible at the address <http://biopartners-dibb.ge>.

3. Progress of the website deliverables

The website of <http://biopartners-dibb.ge> contains from two parts of applications:

293514	BIOPARTNERS	D4.2 BIOPARTNERS website
--------	-------------	--------------------------

3.1. Location

1. Front-end interface, from the website, the visitors or navigators can visit this part from the website address: <http://biopartners-dibb.ge>

2. System administrator homepage: in this homepage it is disallow for any user to access this homepage without login name and password given from the administrator of the website. In this homepage it is given all accessibility to a special program, within it, the user can access additional services like: notice the size of the website, change the password, insert new users, delete old users, monitor the movements activities of the website's visitors, add/modify articles, categorize articles and publish them on the web site.

3.2. Web services:

In addition to the domain name and the domain name hosting there is enough space that will include in the future such as MySQL/DP8-10 professional and completed database.

a. Specifications of the Content Management System: It contains from integrated management program of the BIOPARTNERS website, as well as manages and deals with various applications and facilities which can activate and inactive some or all of them regarding their need, such as these applications are News and Events, Web Links, Guestbook, Calendar, Archive of Articles and Comments, Banner System, Photo's Album, Registration, Miscellaneous advertisements, Follow-up the Progress of the Team, Regular Periodical Newsletter, Site Map, Send the Website to Friend, Web-Search Engine. All of these will make the visitors more comfortable and more powerful to deal with the website.

b. Technical detail of the system: the website-System depends on the initiative of the open source, which allows supply of free CODE compiler of the system, for the purpose of leaving the door projects to the partners to add and modify some features and as they need, The website is developed through the PHP/html language, it is compatible with Internet servers that are running globally.

c. The database is MySQL/DB8-10, this type is one of the best database systems currently available, and rely on open source systems as well, and is characterized by its language to complete its integration with this system which achieves high performance and high efficiency.

d. The website is built in a platform taking in mind how to deal with groups of users (visitors, members, supervisors, ..., etc) to establish a system by the groups. Currently the users and groups management is not available, but the foundation is already developed.

4. Homepages of the website:
